

# ENVIROMENT PROBLEMS

# AIR POLLUTION

## WHAT IS IT AIR POLLUTION? WHAT ARE THE MAIN CAUSES?

- Air pollution is caused by the presence of chemical and gaseous substances in the air;
- Air pollution is mainly caused by industrial fumes, car exhausts and heating systems;
- Some ideas to try to reduce air pollution are: create more cycle areas, limit the use of machine and reduce the use of plastic.

# DIVING OCEAN

THE OCEAN are in very poor conditions and this leads to a decrease of the fish. All this is caused by a large quantity of plastics present in the ocean

# DIAPPEARING SPECIES

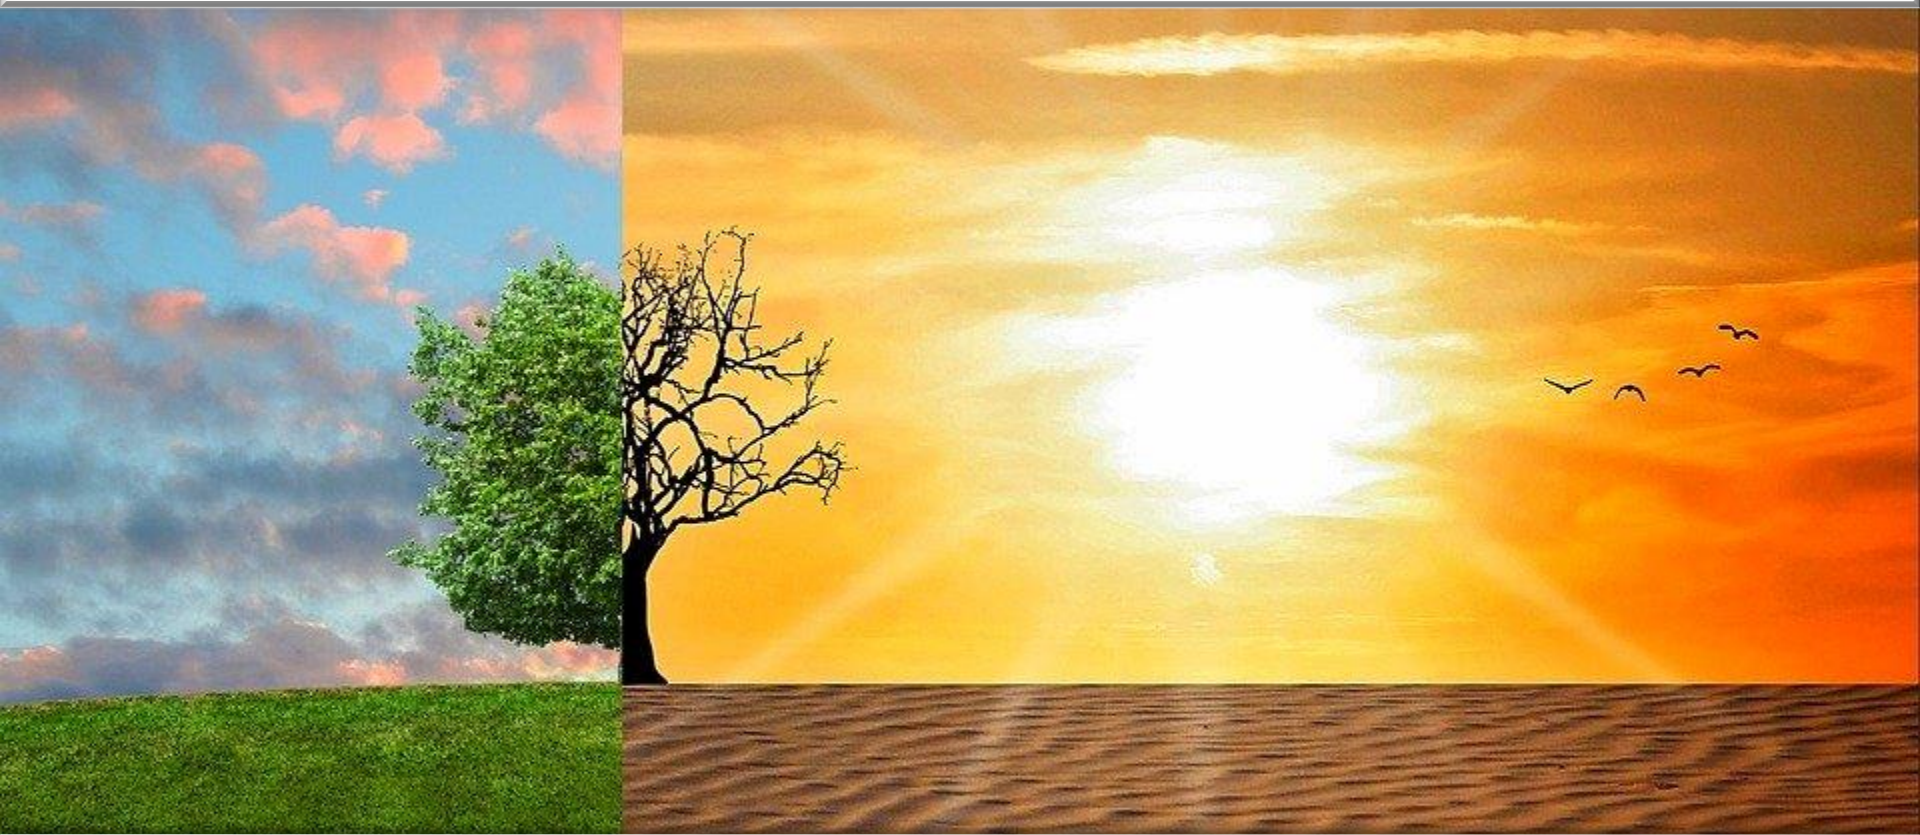

Many  
Animals  
are  
becoming  
extinct

# THINNING OZONE LAYER

**A hole** is forming inside **the Ozone layer** that is become always bigger.

# CHANGING CLIMATES

The climate is changing. There are more floods, sea level rise and the global warming.

# HOW CAN SAVE THE WORLD?

You should use the car less and  
use the bicycle and walk more

Use renewable energy

Reduce the use of fossil fuels

Use electric machines

Reduce the use of plastic
